Oracle EPM Application Services  
Oracle EPM Infrastructure Services

METAVERO is an Oracle Gold, Cloud Standard partner with a focus on planning, consolidations, and automation.

We strive for complete client satisfaction with the solutions we deliver. In addition, METAVERO believes in comprehensive knowledge transfer that leaves your team capable.

Our leaders provide a unique, cross-functional skillset:

- Finance
- Information Technology
- Process Improvement

**What makes us different?**

METAVERO's project leadership provides clients with a unique, cross-functional skillset bridging finance and IT to maximize end-to-end process improvements.

With more than 25 years of direct Fortune 500 experience, METAVERO leadership blends finance and information technology viewpoints.

METAVERO's project leadership provides clients with a unique, cross-functional skillset bridging finance and IT to maximize end-to-end process improvements.

With more than 25 years of direct Fortune 500 experience, our leadership blends finance and information technology viewpoints.

**John A. Booth, *Managing Director***

John is very active across a large, integrated network throughout the consulting and technical industry. His long history of multi-product implementations and technical research and his relevant Fortune 500 experience continue to distinguish achievements and demonstrate success for clients.

**Sarah M. Schwind, *Operations Director***

Sarah brings more than 15 years of Fortune 500 functional business experience to METAVERO clients. Her broad technical background in engineering, process control, Lean Six Sigma, and corporate finance complements the hybrid skillset required in the EPM niche.

## METAVERO SERVICES

### Implementation

Our implementation services cover the full lifecycle for cloud or on-premise Hyperion deployments:

### Upgrades and Platform Migrations

Deploy the most current software releases to access new features and receive the best support from Oracle. Ensure compatibility with Microsoft Office, browsers, back-end server and database infrastructure.

### Managed Services and Support Packs

Augment your existing team's Hyperion skillset and bandwidth with our managed services, providing dedicated monthly resourcing and service levels. Consider a customized support pack, tailored to meet your specific needs.

### Proof-of-Concept (POC) Environments

Take advantage of our POC environments or your public cloud of choice to test drive new releases and understand upgrade impacts on your application. This METAVERO capability supports changing business requirements while balancing delicate financial business cycles.

### Oracle Cloud or Public Cloud

Using the cloud enables a nimble business and we recommend it as the first choice for new implementations. METAVERO's assessment services explore how Oracle cloud and public cloud products can address your business needs.

### Engineered Systems

For applications with extreme performance or scalability needs, Oracle's engineered systems may offer a better fit than cloud systems. Leverage METAVERO's experience with large-scale Planning, Essbase, and consolidation deployments using Oracle Exalytics™.

### Virtualization

Virtualization is a mature and proven technology. The majority of on-premise Hyperion deployments use virtualization in one form or another. METAVERO can assist your technical teams in ensuring applications will perform to expectations in a virtualized environment.
